

Fortron® PPS. A breath of fresh air.

With the right protection, coal can be clean. It can be economical. It can deliver reliable and affordable energy for years to come. At Ticona, we're working hard to find better ways to keep the utility industry and the environment on friendly terms. Long term.

Filters made from **Fortron® PPS** polymers are extremely good at one thing – trapping particulates from coal burning power plants before they get into the air. Over and over and over again.

Learn more about performance driven solutions from Ticona... And we'll all breathe a little easier.
